

Chapter Index

The material of the Index is arranged according to the Chapters, because it is supposed that the reader is searching within some context. Capitalised initials of entries (if not names) indicate Sections.

B. General Linear Fluid Acoustics

A

absorption coefficient 46
adiabatic exponent 6,9,10,35,37
admittance relation 11,42
admittance rule 11
averaged intensity 11

B

balance
– of entropy 36
– of heat 36
– of internal energy 36
bilinear concomitant 26
Bloch waves 44
Boundary Condition
– at a moving boundary 38
– at liquids and solids 39
boundary conditions
– adiabatic 8
– for particle velocity 5,13,23,24,39
– for sound pressure 5
– isothermal 8

C

Christoffel symbols
– of first kind 30
– of second kind 29
co-ordinate system 16,20,21,26,30,32
– Cartesian 33
– curvilinear 26
– cylindrical 21
– reciprocal 27
– spherical 34

co-ordinates

– contravariant 27
– covariant 27
– mixed 27
– transformation 28
compressibility
– isothermal 9,36
– isotrope 36
conservation
– of impulse 5
– of mass 5,6
– of wave numbers 39
Corner conditions 40
cross impedance 24

D

density variation 36–38
density wave 6,7,37
differential operator 31,33,34
Differential relations of acoustics 34
Dirac delta function 5,12,13,16,21
divergence 32
Doppler shift 38

E

entropy variation 36–38
equation
– of continuity 34
– of energy 35
– of state 5

F

Field admittance 6,11
field quantities 6,36,44

Field variables 34

Fundamental differential equations 5

G

gas constant 9,10,36

gradient 12,31

Green's function 13–18

- in 2-dimensional polar co-ordinates 17
- in 3-dimensional infinite space 17
- in Cartesian co-ordinates 19
- in cylindrical co-ordinates 18
- in spherical harmonics 17
- of a set of plane waves 16
- of cylindrical wave 16
- of point source 13

Green's functions and formalism 13

Green's integral 12

Grid on porous layer

- grid with finite thickness, narrow slits 53
- grid with finite thickness, wide slits 56,57
- thin grid 50,52,53

H

Hamilton's principle 25

Hartree harmonics 44

heat balance 6

heat conduction 6,35,37

heat wave 6

Helmholtz's wave equation 5

higher modes 48,56

I

impulse equation 6

Integral relations 12

L

Lagrange density 25

Lagrange function 25

Lagrange multiplier 25

Laplacian

- of a scalar 32
- of a vector 32

line source 21,24

M

Material constants

- of air 8,9

mirror source 19

mode in a duct 19,20

modes

- orthogonality of 19,20

molecular mean free path length 35

monopole source 5

N

nabla operator 31

Navier-Stokes equation 35

normal vectors on co-ordinate surface 27

O

orthogonality integral 15

Orthogonality of modes 19

- in a bulk reacting duct 20
- in a locally reacting duct 19

orthogonality relation 17

orthonormal basis vectors 31

P

particle velocity 5,13,23,24,37,39

Periodic structures

- admittance grid 44
- grooved wall, narrow grooves 46
- grooved wall, wide grooves 48

point source

- above a locally reacting plane 19
- above hard or soft plane 18

potential

- scalar 6,7
- vector 6

potential function 13,25

Prandtl number 8,9

pressure variation 38

Principles of superposition

- for unsymmetrical walls 22
- hard-soft superposition 24
- in a symmetrical space 23

R

radiating spatial harmonics 46,51

Rayleigh's postulate 6

reciprocity principle 12
 reflection coefficient 52,54,55,57,58
 reflection factor 46–50,52
 rotation of a vector 32

S

scalar product 16,19,27,29,31
 shear stress 5
 – by viscosity 35
 shear wave 6
 shock front 39
 solid-liquid interface 40
 Sommerfeld's condition 12,21,22
 sound pressure coefficient 7
 sound velocity 9,10,38
 – in gas mixture 10
 Source conditions 21
 spatial harmonic 44–47,49–52
 specific heat 6,9,10,35
 stationary flow 5
 Surface wave
 – along a locally reacting cylinder 42
 – along a locally reacting plane 41

T

Table with
 – material constants of air 9
 – regression constants for data of air 11
 tangent vectors
 – at co-ordinate lines 27
 temperature coefficient 7

temperature variation 37
 temperature wave 38
 tensor
 – derivative of 30
 thermal expansion coefficient 36
 thermal pressure coefficient 36
 thermal wave 7
 thermodynamic relations 36
 total time derivative 34

U

unitary tensors 27,30

V

vector
 – angle between 29
 – derivative along a curve 30
 – derivatives of basis vectors 29
 – length of 29
 – scalar product 29
 – triple product 29,31
 – vector (cross) product 29,31
 Vector algebra 28
 viscous energy loss 35,36
 viscous shear 5,6

W

wave equation
 – adjoint 26
 – homogeneous 5,13,14,20,21
 – inhomogeneous 13
 wave numbers
 – characteristic 20

C. Equivalent Networks

Π

Π networks 66
 Π-circuit impedance 66

C

Chain circuit 73
 characteristic
 – impedance 66
 – propagation constant 66

D

Distributed network elements 65

E

electro-acoustic analogy 59
 – UK-analogy 64
 – Uv-analogy 65
 electromagnetic quantities 59
 Elements with constrictions 71
 end correction 59,69,71,75

Equivalent Networks 59, 66, 71, 74, 75, 126

equivalent oscillating mass 71, 72

F

four-pole equations 66

H

Helmholtz's source theorem 62

L

lumped elements 65

M

mesh theorem 62

N

node theorem 62

O

open-circuit source 62

R

reciprocal invariant 63

Reciprocal networks 63, 64

rule for the construction of a reciprocal network 63

S

short-circuit source 62

Sources 62, 63, 73

Superposition of multiple sources 73

T

T-circuit impedances 66

T-networks 66

Table

- with defining relations for passive mechanical components 61
 - with electromagnetic quantities 59
 - with passive electrical and mechanical circuit components 60
 - with reciprocal electrical elements 63
 - with UK-analogous elements 64
 - with Uv-analogous elements 65
- tube section
- terminated with Helmholtz resonator 69
 - with a layer of air 70
 - with a layer of porous material 69
 - with hard termination 67
 - with open termination 68
 - with perforated plate in the tube 70

D. Reflection of Sound

A

absorber

- uneven 141
- with random admittance 142
- with variable admittance 141

absorber in baffle wall

- circular absorber 140
- in constant height above baffle 142
- rectangular absorber 141
- strip in baffle wall 144

absorption coefficient 127, 128, 130, 133–136, 139

absorption cross section 138, 145, 147

absorption of finite-size absorbers 136, 153

acoustic corner effect 152

angular far field 139, 141, 147

B

border scattering 153

bulk reacting layer 132, 136, 166

C

characteristic values 130, 132, 150

- of Mathieu functions 150

cross impedance 163, 179

cross section

- absorption 138
- extinction 138
- scattering 138

D

- diffuse absorption coefficient 133
 - in 2 dimensions 133
 - in 3 dimensions 133
- diffuse sound incidence 140
- diffuse sound reflection
 - at bulk reacting plane 165
 - at locally reacting plane 133

E

- effective power
 - absorbed 138, 153
 - scattered 138
- elliptic-hyperbolic co-ordinates 149, 151
- extinction theorem 139

F

- Fresnel's integral 144

G

- Green's function 137, 138, 143

L

- line source above an absorbing plane 164
- locally reacting layer 131

M

- Mathieu differential equations 150
- Mathieu functions
 - azimuthal 150
 - of the Bessel type 150
 - of the Hankel type 150
 - of the Neumann type 150
 - radial 150
- mirror source 138, 156, 161, 163, 167
- mirror source approximation 161
- mode norms 151

P

- pass integration 156, 159, 161, 162

- pass way 155, 156, 159, 160, 171
- path of steepest descent 155, 170, 171
- plane wave reflection
 - at a locally reacting plane 127
 - at a multilayer absorber 132
 - at a porous layer 130
- point source above absorber
 - exact saddle point integration 170
 - exact solution 148
- pole contribution 155, 158, 159, 171, 173, 174
- pole crossing
 - condition for 159
- principle of hard-soft superposition 163

Q

- quantitative corner effect 152

R

- radiation impedance 154
- reflection of sound 127
- refracted angle 130, 132

S

- saddle point 156, 158–160, 163–165, 167, 170, 171, 174, 182
- saddle point integration 156
- scattered wave 137, 143, 144
- scattering at finite-size local absorber 136
- scattering at the border of an absorber half-plane 142

U

- uniform pass integration 159

V

- variational principle 146

W

- wall admittance 127, 142

E. Scattering of Sound

A

- absorbent dam
 - flat 214
 - high 214
 - semicircular 214,227
- absorption cross section 187
 - for diffuse sound incidence 188
 - of a cylinder 197
- artificial medium of scatterers 198

B

- backscattering cross section 188,263
- boundary conditions 254
- bubble oscillation 263
- bulk reacting cylinder 185

C

- composite medium 230,231,233,247–249

D

- delta pulse 266
- diffracted wave 266–268
- Dirac delta function 266,272

E

- effective
 - compressibility 247
 - density 198,247,249
 - wave impedance 244
 - wave number 236
- elliptic-hyperbolic co-ordinates 217
- elliptical cylinder atop a screen 209
- extinction cross section 187,188,191,238
- extinction theorem 188

G

- geometrical shadow limit 217

H

- high dam 215,218,219,221,223
 - hard ground 215,219,222
 - line source 223
 - on absorbent ground 221,223

- on hard ground 218

L

- line source 199–201,204–207,209,210,223,229
- locally reacting cylinder 198,199,201

M

- massivity 198,238,240,242,244,247,248
- Mathieu functions 209,211,214,218,219,285
- mirror source 222,266,267
- mixed monotype 244,248
- modal reflection factors 202,210,272
- monotype scattering 231–233,238,244,246,248
- multiple scattering
 - elastic scatterers 258
 - porous scatterers 258
 - rigid scatterer at rest 258
- multiple scattering at cylinders and spheres 198

P

- polar mode numbers 275,283
- principle of superposition 218,224

Q

- quality factor of shell resonance 262

R

- radiating mode in resonance 262
- radiation impedance of shell modes 261
- refracted angle 186
- Reiche's experiment 233–235

S

- scattered far field 187,190,234,237,244,246,249,262,266
- scattered field 186,195,199,200,224,225,228,229,231,234,244,246,249,260,264,274,283

scatterer

- bulk, movable 241
- hard 198, 258, 260

Scattering

- at a cone 270, 282
- at a corner 201
- at a flat dam 223
- cross section 187, 191, 194
- in random media 230, 232, 244, 248
 - mixed monotype 248
 - monotype scattering 244
 - triple-type scattering 248
- of a plane wave
 - at a screen with mushroom-like hat 213
- of plane wave
 - at a liquid sphere 263
 - at cylinder 185, 188
 - at cylinder and sphere 188
- of spherical wave
 - at a soft cone 271

scattering

- at a hard screen 208, 209, 268
- at a perfectly absorbing wedge 264
- at a screen with cylinder atop 209
- at a semicircular absorbent dam 214
- at elastic cylindrical shell 260

- of impulsive spherical wave at a hard wedge 266
- of plane or cylindrical wave at a corner 201
- of Sound 185
- shadow zone of a corner 203
- shell resonances 261, 262
- sound attenuation in a forest 242
- source condition 202, 210, 271–273
- surface impedance
 - of modes 186
- symmetrical scatterers 236, 237, 246

T

Table

- with grad and rot components cylinder or sphere 252
- with strain velocity at cylinder or sphere 252
- with survey for scattering in random media 232
- triple-type scattering 231, 232, 248

W

- wave impedance
 - in random media 244
- wave impedance 185

F. Radiation of Sound

A

array with small elementary radiators 331

B

back orifice end correction 325
Bouwkamp's integral 303, 306, 314

C

complete elliptic integrals 304, 329

D

directivity

- of circular membrane or plate 334
- of circular piston in baffle 332

- of circular radiator with nodal lines 334
- of clamped rectangular plate in fundamental node 333
- of dense circular array of point sources 332
- of dense linear array of point sources 332
- of free rectangular plate in fundamental mode 333
- of radiator arrays 330
- rectangular piston in baffle 305, 333
- two point sources 331
- directivity coefficient 330
- directivity factor 330, 331, 334, 335

directivity function 291, 303, 306, 314
 directivity index 330
 directivity value 330

E

end correction
 – of a slit in a slit array 326
 End corrections 287, 309, 316, 318, 346

F

far field 290, 291, 303, 306, 314, 330,
 331, 334, 336, 340, 345
 field admittance 288

G

Green's function 289

H

Hankel transform 291, 341, 343
 Helmholtz resonator 297
 higher modes in the neck 321, 322,
 324
 Huygens-Rayleigh integral 331

I

interior end correction 316
 – in a slit resonator array 322
 – with only plane wave 324
 interior orifice impedance 325, 326
 – with slit in contact with porous
 material 325
 – with slit in some distance to
 porous material 326
 – with viscous and caloric losses
 325

L

long source 341

M

modal impedances 292
 mode norms 292
 monopole 337

O

oscillating mass 287, 288, 293, 316,
 317, 326, 328, 342

– of a fence in a hard tube 328

P

piston radiator
 – circular 302, 330
 – elliptic, in a baffle 303
 – free circular disk 303
 – in a hard tube 327
 – on a sphere 297
 – plane 291, 301, 309
 – rectangular 305
 – ring-shaped 330
 – small circular 330
 – strip-shaped 299
 – with radial symmetry 341
 plane radiator 309, 311, 313, 331, 339
 point source
 – dipole 338
 – lateral quadrupole 339
 – linear quadrupole 339
 – monopole 337

R

Radiation and excitation efficiencies
 344
 radiation directivity 330
 radiation factor 288
 Radiation impedance 287, 289–291,
 293, 296, 298, 300, 301, 304, 306, 310,
 312, 314, 316, 328, 329, 340, 342, 345,
 346
 – definition 287, 314
 radiation impedance
 – evaluation 301
 – mechanical 287, 329
 radiation loss 287
 radiation of plates 344
 radiation reactance 309, 320–322
 radiator
 – breathing sphere 293
 – cylindrical 295
 – finite length cylinder 335
 – in a baffle 339
 – in spherical mode patterns 291
 – line source 344
 – monopole and multipole 337
 – oscillating cylinder 317
 – plane 309, 311, 313, 331, 339

- rectangular, wide, field excited 313
- rigid sphere 293
- strip-shaped 299
- strip-shaped, narrow, field excited 309
- strip-shaped, on a cylinder 299
- strip-shaped, wide, field excited 311
- with 1-dimensional pattern 343
- with central symmetry 331
- with nearly periodic pattern 343

S

Spherical radiator 288,291

G. Porous Absorbers

A

absorber variable 349,350,353,355,358,373,394

B

Biot wave 391

Biot's theory 385

bulk compression modulus 388

bulk density 347,351

C

characteristic constants

- from fitted theoretical models 399
- wave impedance 347,371,375

characteristic propagation constant 347,371

closed cell model 371–374

compressibility 351,353,355,358,360,371,372,375,378

compressional waves 388–390

continued-fraction approximation 354

coupling coefficients 386

coupling density 386

D

Delany & Bazley regression 394

density wave 352,355,358,371–373,378,381,383,384

T

Table

- with end corrections of different radiators 318
- with oscillating masses of spherical and cylindrical radiators 317

U

uniform end correction

- of plane piston radiator 309

E

effective

- air compressibility 353,355,358
- air density 353,355,358
- resistivity 351

effective wave multiple scattering

- in transversal fibre bundle 379–381

empirical relations for characteristic constants 394

equations of motion 386,392

equivalent network of porous material 351

equivalent radius 387

F

fibre bundle 356,371,373–376,379–381,383–385

fibrous material 347,350,356

- parallel fibres 350
- random arrangement 357
- regular fibre arrangement 369
- transversal fibres 373

fitted theory 400

- of flat capillaries 401
- of the quasi-homogeneous material 399

flow resistivity

- of random fibre orientation 350

flow resistivity 347, 349–351, 353–357,
360, 369, 370, 373, 379, 387, 394, 399
– of parallel fibres 350, 356
– of transversal fibres 350
– with random fibre diameter and
orientation 356
flow resistivity 349
flow velocity profile 353, 355
friction 350, 351
fundamental equations 386, 388, 389

I

inertia of the air in pores 351
input impedance
– of a porous layer 391, 399
– of a porous layer with adhesive
front foil 392

M

massivity 347, 350, 353, 357–359, 361,
369, 371, 373, 376, 384
matrix material 347, 350, 352, 355, 388
matrix vibration 351
Mechel & Grundmann regression 398
mineral fibre material 347, 348, 352,
398
multiple scattering model 371, 375,
376, 380

N

Navier-Stokes equation 361

O

open-cell model 371, 373, 375
open-cellular foam 348

P

Poisson distribution 357, 359, 370, 394
Porous Absorbers 347, 385
Porous material
– model with flat capillaries 355
porous material 347, 349, 351, 352, 355,
370, 381, 385–387, 391, 399
– model with flat capillaries 354, 356
potential coupling factor 387
potentials 372, 373, 388, 390
pressure force 367
propagation constant 347, 352, 355,
358, 371, 375, 381, 394, 400

Q

quasi-homogeneous material 347,
350, 352, 399

R

randomised fibres 356, 359, 369
Rayleigh's capillary model 352
regular fibre arrangement 356
relaxation 350–352, 358
relaxation frequency 352, 358

S

Snell's law 391
sound propagation
– parallel to the fibres 358
– transversal to the fibres 370
strain-stress equations 386–388
structure factor 347, 349–351, 386
structure parameters 347

T

Table
– with ranges of porosity of materi-
als 348
– with volume and surface porosi-
ties, and structure factors of dif-
ferent structures 349
Theory of the quasi-homogeneous
material 350
tortuosity 386, 387, 390
transversal fibre bundle 373–376,
379–381, 383, 384

V

velocity profile 353, 355, 357, 384
velocity profile around a fibre 384
viscous and thermal losses 352, 355,
358
viscous force 367, 369, 387
volume porosity 347, 350, 351, 386

W

wave equations 388, 389
wave impedance 347, 349, 351, 352,
355, 358, 371, 375, 381, 394
wave number of the shear wave 390
weak coupling 390

H. Compound Absorbers

Π

Π-fourpole 445

A

absorbed power 493–495
 absorbent neck walls 430, 431
 – narrow neck 431
 – wide neck 431
 Absorber of flat capillaries 404
 absorption coefficient 405–407, 481–483, 490–492, 495, 500, 501
 admittance
 – average 403, 477
 – homogenised 403
 angular distribution 476, 478
 array
 – of $\lambda/4$ -resonator 474
 – of circular necks 434
 – of Helmholtz resonators 435, 456
 – of parallel slits 407, 437, 449
 average input impedance 456
 average surface admittance 456, 459, 464

B

backscattering 477
 bending loss factor 485, 496

C

capillaries 404, 405, 421, 422, 431, 457, 463, 476, 497, 502
 capillary wave modes 483
 characteristic equation 422, 431, 460, 483, 484
 coincidence frequency 467
 complex bending modulus 467
 Compound Absorbers 403
 critical frequency 462, 467, 485, 496
 cylindrical shell 467, 469

D

density wave 421, 483
 directivity 477, 479

E

effective bending modulus 497
 – for perforated panel 497
 effective plate partition impedance 498
 effective surface mass density 457–459, 462, 467
 elastic panel 485, 496
 elliptic-hyperbolic co-ordinates 486
 end correction 410, 415, 417, 418, 425, 434, 436, 437, 445–448, 452, 457–459, 472, 497
 equivalent network
 – for the perforated panel 498
 – of a Helmholtz resonator 436

F

foil
 – elastic 457, 461, 462, 465–467, 471
 – elastic, with losses 467
 – limp or elastic 403, 465
 – porous and elastic 467
 – porous and limp 466
 – tight and elastic 466
 – tight and limp 466
 – tight or porous 403, 465
 Foil resonator 469, 470
 Free plate with an array of circular holes 429
 friction force coupling 499, 500

H

Helmholtz resonator 403, 419, 435, 436, 444, 449, 452, 456, 502
 Helmholtz's source superposition theorem 462

L

loss factor 420, 426, 428, 467, 485, 496
 lowest resonance 419, 420, 429, 470

M

mass reactance
 – of resonator orifice 417

matching

- average sound pressures 409

Mathieu differential equations 487

Mathieu functions

- azimuthal 487
- radial 487

micro structure

- of perforation 497

modal partition impedances 488

modal reflection factors 440, 443, 449, 451

mode coupling coefficients 412, 454, 493

multilayer absorber 403

O

orifice impedance

- back side 409, 417, 433, 436, 445–447
- front side 409, 413, 417, 419

oscillating mass 403, 419, 426, 436, 445, 448, 452

P

panel perforation 497

partition impedance

- of membranes 469

perforation pattern 497

periodic structure 403, 438, 474, 480

plate vibration modes 488

Plate with narrow slits 407

Plate with wide slits 411

poro-elastic foil 457, 461, 462, 465, 466, 471

porous foil 452

porous panel absorber

- rigorous solution 496

pressure source 403

primitive root diffuser 475

propagation constant

- in a flat capillary 405

pseudo-random variation 474

Q

quadratic residue diffuser 475

R

radiation impedance 403, 404, 414

reflection factor 404, 405, 440, 443, 449, 451, 495

resonance condition 419, 437

resonance formula 420

resonance frequency

- of foil resonator 469
- of slit resonators 419

Ring resonator 471, 473

S

scattered far field 474, 476–479

scattered field 491, 495

simply supported plate 485, 496

Slit array

- with viscous and thermal losses 420

Slit resonator

- dissipationless 415
- with viscous and thermal losses 426

slit resonator array

- covered with a foil 462
- with porous layer on back orifice 449
- with porous layer on front orifice 452
- with subdivided neck plate 461
- with subdivided neck plate and floating foil 457, 461

spatial harmonics 451

spherical shell 468

surface impedance 456, 469, 493

surface porosity 404, 436

T

thermal wave 421

Tight panel absorber

- approximations 493
- rigorous solution 485

V

viscous and thermal losses 404, 407, 420, 426, 430, 431, 434, 438, 476

viscous wave 421

W

- wave equation of a membrane 469
- wave impedance
 - in a flat capillary 405

I. Sound Transmission

A

- absorber variable 504,546

- filled interspace 538,539
- flat capillary 509,540
- foil 506,511,519
- force impedance 527
- free bending wave number 525,529

G

- generalized bending stiffnesses 537

H

- hole transmission with equivalent network 515
- hole, sealed, filled 515

I

- isotropic plate 537

L

- least attenuated mode 517,518
- longitudinal wave number 526,529, 535
- loss factor 529,535,536,542,552,566, 590

M

- matching of fields 579
- Mathieu functions 565–567

modal partition impedance 552, 563, 571, 576
 mode coupling coefficients 566, 569, 574, 585
 mode norms 522, 553–556, 561, 562, 566, 569, 571, 573, 583
 momentum impedance 527

N

network elements 538, 541
 niche effect 559
 niche modes 560, 561, 563
 noise barriers 503
 noise sluice 503, 521, 523, 525, 594

O

office fences
 – with second principle of superposition 584

P

partition impedance 527–529, 533, 535, 538, 542, 545, 552, 563, 566, 571, 575, 576
 plate mode norms 562, 569
 plate modes 552, 555, 557, 558, 560, 562, 565–567, 570, 573
 Plate with absorber layer behind 541
 Plate with bending losses 535, 552
 Plenum modes 574–576, 578
 plug of porous absorber material 503
 Poisson's ratio 526, 589, 593
 porous material 504, 506, 509, 511, 519, 538, 541, 546, 571
 propagation constant 503, 509, 511, 517, 544, 545, 575

R

radiation impedance 507, 508, 512, 513, 516, 519, 520
 receiving room 559, 577, 578, 581

S

Sandwich Panel 542
 – with elastic core 589
 – with porous board as core 589
 – with porous board on back 547

– with porous board on front 544
 sealing impedance 507
 shear wave number 529, 535
 simple plates 536, 538, 594
 simply supported plate 552, 557, 567
 slit
 – narrow, empty 509
 – narrow, empty with sealing 509
 – narrow, filled with porous material 506
 sound transmission
 – through a hole in a wall 511
 – through a simple plate 532, 534
 – through a slit in a wall 506
 – through finite size double wall with porous absorber core 571
 – through finite size plate with a front side absorber 567, 570
 – through infinite plate between two different fluids 587
 – through lined slits in a wall 517
 – through office fences 503, 582
 – through simply supported plates 565, 567
 – through single plate in a wall niche 559
 – through strip-shaped wall in infinite baffle wall 564
 – through suspended ceilings 577
 sound transmission factor 503
 sound transmission through plates
 – with equivalent circuit 534, 588
 Struve functions 508
 suspended ceiling 503, 574, 577, 580, 581, 594

 Extended-Tube Three-Pass Perforated Element 828, 840

F

flow impedance 793–795, 797, 802, 805, 818–820, 830, 831, 833, 836, 837
 flow resistivity 837
 flush-tube three-pass perforated element 827
 four-pole parameters 796, 797

G

granular pellets 829
 grazing flow 808, 818, 834, 841
 grazing-flow impedance 818, 836, 837

H

Helmholtz resonators 830
 Hose 801, 804–806, 820, 822, 832, 835, 840
 hose-wall impedance 805

I

impedance jump 801
 In-line Cavity 831
 insertion loss 796, 797

J

junction of pipe and chamber 800

L

level difference 796, 798

M

Mach number 794, 795, 798–802, 808, 820, 833, 834, 837, 838, 840
 matrix equation 793, 827
 mean flow 793, 799, 800, 802, 832, 840, 841
 micro-perforated Helmholtz panel
 parallel baffle muffler 836
 modal matrix 807, 815, 826
 Muffler Acoustics 793
 Muffler performance parameters 796

N

noise reduction 796, 798

O

open-end elements 818, 821

P

Parallel Baffle Muffler 832, 836, 839
 partition impedance 807, 837, 838
 Pellet Block Element 829
 Perforated Extended Inlet 814
 Perforated Extended Outlet 813
 perforates in stationary media 808
 – with cross flow 807
 – with grazing flow 808
 Pod Silencer 832
 porous blocks 828
 principle of impedance mismatch 801

Q

Quincke tube 833, 841

R

Radiation
 – flow resistance 795
 – impedance 793, 795, 797, 805
 radiation
 – from the open end of a flow duct 795
 reflection factor 794, 795, 801
 reversal contraction, two-duct, open-end perforated element 812
 reversal expansion element 812, 827, 828

reversal-contraction 820
 reversal-expansion 820
 reversal-expansion, two-duct, open-end perforated element 811
 Reverse-Flow 810, 817, 819, 824, 840
 Reverse-Flow Contraction Element 810, 819
 Reverse-Flow Expansion Element 810, 819
 Reverse-Flow, open-end, extended perforated element 824
 Reverse-Flow, open-end, three-duct element 819
 Reverse-Flow, three-duct, closed-end element 817
 reversed-flow elements 818

S

stagnation pressure 799–802
 stationary medium 794, 795, 799, 801, 803, 806
 Sudden area changes 799, 801, 829
 sudden contraction element 827

T

Three-Duct Perforated Element 814, 816, 820, 840
 Three-duct perforated elements with extended perforations 820
 three-duct perforated section
 – common 814, 820
 – particular 816
 Three-Pass perforated elements 825, 827
 transfer matrix 796, 797, 799–804, 806–808, 812, 814, 816, 818–833, 835–840
 transfer matrix representation 796
 transformation matrix 793, 796
 transmission loss 796, 797, 801, 832, 839
 two-duct elements 808, 825
 Two-Duct Perforated Elements 806

U

Uniform tube
 – with flow and viscous losses 798

upsound cross sections 793
upstream end 796

L. Capsules and Cabins

A

absorbent sound source in a capsule 847

B

bending loss factor 845, 848, 862, 866

C

Cabin

- semicylindrical model 861
- with plane walls 865
- with rectangular cross section 869

capsule efficiency 843

capsules

- energetic approximation 843, 844, 847, 852

D

diffuse sound incidence 846, 847, 852, 861, 869

E

equivalent circuit elements 866

equivalent network 865, 867

H

Helmholtz' source theorem 847

Hemispherical source and capsule 857

I

insertion coefficient 846

insertion loss 843, 846, 851, 852, 856, 857, 859, 860

V

volume flow impedance 793, 805, 819, 820

volume flow velocity 793

M

modal partition impedance 862

modal radiation impedance 855, 859

multi-modal excitation 856, 857, 859, 860

N

narrow capsule 850

O

oncoherent sound incidence 868

P

partition impedance 844, 845, 848, 854, 858, 862, 871

R

radiated power 844

S

Semicylindrical source and capsule 853

shadow field 867

sound protection measure 861, 864, 867, 868

sound transmission factor 844

sound transmission loss 846

source impedance 853

T

the source is a pressure source 849

the source is a velocity source 850

M. Room Acoustics

A

addition theorem 908
 algorithms for mirror source construction 939
 anti-symmetrical mode 874
 aperture 889, 897–899
 average absorption coefficient 879, 936, 942
 averaging over time intervals 922

B

beams 937
 break-off criteria for scouting 932

C

centre time 941
 characteristic equations 875
 clarity 941, 943
 collection in a corner source 907
 Combination of corner fields 906
 concave corners 889, 897, 903, 913, 917, 930
 concave model room 891
 condition of visibility 899
 conditions for statistical methods 876
 cone approach 937
 continued-fraction expansion 875
 convex corners 884–887, 889, 890, 896, 897, 899, 900, 913, 917, 930
 corner
 – real 890, 905
 – virtual 890, 905
 corner field 906
 corner set of mirror sources 905–907
 corner source 907, 909, 910, 912, 921

D

daughter source 882–884, 887, 889, 896, 897, 903, 904, 922, 923, 932
 decay curve 923, 937, 939
 decay of the average energy density 923
 decay rate 878, 881
 definition 883, 884, 920, 922, 923, 940, 941, 943

Density of eigenfrequencies 876
 diffuse sound field 879, 880, 936, 937
 directivity factor 883
 distance of limit between direct and reverberant fields 879

E

early and late energy densities 942
 early decay time 939, 940
 edge condition 909
 efficiency checks 899, 905, 909, 912
 eigenfrequencies 875, 876
 Eigenfunctions in parallelepipeds 873
 energy balance 879
 energy decay 936, 937
 energy density 879, 880, 923, 939
 energy integral 937, 942
 equivalent absorption area 880
 equivalent source for the corner field 907
 equivalent sources 922

F

field angle 884, 885, 887, 888, 893, 896, 898, 905, 907, 909, 932, 934
 field angle criterion 884
 field angle of a mirror source 884
 foundation of the mirror source approximation 882
 fundamental solutions 873

G

General criteria for mirror sources 883
 Geometrical room acoustics in parallelepipeds 877
 geometrical subtasks 889, 926
 Global application of the principle of superposition 921
 goal of scouting 931
 grouping of mirror sources 903, 905

I

illegal mirror source 883, 884, 886, 887, 896, 909, 912

impulse response 938–941
 incoherent sources 923
 ineffective mirror source 884
 Inside checks 888, 889, 928
 inside criterion 883, 885, 888, 904, 916, 918, 930
 intensity of a reflection 879
 intensity of reverberant field 878
 interaural cross-correlation coefficient 942
 interaural cross-correlation function 941
 interrupt checks 887, 899, 905, 909, 912, 931

L

Lambert scattering 937
 Lambert's law 935, 939
 late lateral sound level 942
 lateral energy fraction 941
 level decay 878, 881
 looping in mirror source scouting 932, 933

M

mean free path length 877
 – energetic average 877
 – geometrical average 878
 mean reflection rate 879, 936
 mirror source 877, 882–884, 904–906, 909, 914, 918, 924, 930–932, 938, 939
 Mirror source model 882
 mirror sources of parallel walls 907, 910
 mirror-receiver method 910
 mode overlap 876
 model room with convex corners 899
 modes 873, 875, 876, 935
 Monte Carlo method 936, 937
 mother source 883, 884, 888–890, 893, 899, 910, 915, 932
 multiple covering of mirror sources 885

N

nested loops 890, 932
 number of mirror sources 877, 882
 number of reflections 877, 879, 880

O

orchestra pit 897–900
 original source 882, 883, 887, 889, 890, 907, 911, 912, 932

P

parallel walls 891, 907, 910, 911
 principle of superposition for unsymmetrical absorption 920
 probability density 877, 936, 939

R

random scattering 935
 random-incidence absorption 936
 ray energy 935–937
 ray path 938
 Ray sources 938
 ray tracing 935, 937
 reciprocity in the mirror source method 910
 reflection factor of a plane wave 883
 reflection rate 879, 936, 942
 reverberation curve 923–926
 reverberation time 876, 878, 881, 922, 923, 925, 926, 940, 942
 – definition 922
 – Eyring 881
 – Millington-Sette 881
 – Pujolle 881
 – Sabine 881
 reverberation time with mirror source results 922
 room acoustical parameters 940, 942
 room impulse responses 939
 room transfer function 877
 room with concave edges 924

S

scaled co-ordinates 891
 scattered field 914, 917–919
 scouting of mirror sources 930–932
 secular equation 874, 875
 shading 889, 896
 sound strength 941, 942
 source factor 883, 886–888, 895, 902, 904, 910, 911, 915, 918, 922, 932
 source list 889, 890, 899, 932–934

sources as a network 922
 specular reflection 935, 937
 speech intelligibility 941
 statistical methods 876
 Statistical room acoustics 879
 subjective transparency 941
 symmetrical mode 874, 875

T

Table

- with numbers of legal and effective mirror sources 901

N. Flow Acoustics

A

Acoustic analogy
 – with effects of solid boundaries 984
 – with mean flow effects 970
 acoustic efficiency 1003
 acoustic power 1003, 1004
 Acoustics of moving sources 993
 adiabatic flow 946
 aerodynamic sound 949, 964, 1000
 – Doak's theory of aerodynamic sound 981
 – fluctuations of flames 991
 – turbulent flames 991
 Aerodynamic sound sources 1000, 1012
 arbitrarily moving surface 999
 autocorrelation 953, 1004
 average
 – ensemble 950
 – mass-weighted 950
 – phase 950
 – spatial 949
 – time 949
 averaging 948–952, 959

B

Basic equations of fluid motion 954
 Biot-Savart law 979
 blade thickness noise 1007
 boundary layer 948, 949
 bulk modulus
 – adiabatic 946

temporal density of reflections 877
 total number of reflections 877

V

visibility check 899

C

coefficient of expansion 946, 956
 compressibility 946, 959, 968, 990
 compressible flow 946, 952, 968, 969, 979
 Concepts and notations in fluid mechanics 945
 conservation
 – of mass 960
 – of momentum 960
 continuity equation 951, 952, 954, 957, 959–961, 963, 971, 973, 976, 977, 981, 984, 992
 convected scalar wave equation 982
 convected wave operators 980
 – Doak's form 981
 – Howe's form 981
 – Möhring's form 981
 convective operator 972
 convective wave equation 952, 962, 972, 974, 998
 Correlations 953, 1017
 Curle's equation 988
 cylindrical co-ordinates 962

D

Decomposition 950–952, 958, 959, 961, 965, 968, 972, 975
 – of field qualities 965
 dipole point source 995, 996

dipole source 965, 976, 985, 989, 990,
995, 996, 1012
dissipation rate 954, 992
double subscript summation rule 945

E

energy density 955
– fluctuating part 958
– stationary part 958
energy equation 954, 955, 957, 981
enthalpy
– specific 946, 955, 972, 977
– stagnation 947, 955, 977
– total 955, 977–982, 1015
entropy 946, 947, 956, 970, 973, 978,
979, 983, 988, 990
equation of continuity 960, 963, 964
equation of motion 960, 963, 964
equation of state 951, 956, 961
Equations of linear acoustics 960, 961
Euler equations 954, 956, 958
external source flux 964

F

Ffowcs Williams-Hawkins equation
1015, 1016
fluid
– density 955
– energy 955
– ideal 945, 964
– Newtonian 945
– non-Newtonian 945
– pressure 946
– viscosity 970
free-space solution 965

G

gas constant 945, 956
generalised wave equation 987

H

Heaviside function 984
Helmholtz vorticity equation 979, 980
homotropic flow 947, 978, 982

I

ideal flow 946
inhomogeneous wave equation
– convective 970, 971
– Dowling's form 988
– Ffowcs Williams-Hawking's form
984
– Goldstein's third-order form 973
– Goldstein-Howe's form 1005
– Howe's form 978
– including the stream function 975
– Lighthill's form 963, 988
– Lilley's convective inhomogeneous
form 971
– Lilley's form 971
– Meecham's form 969
– Phillip's convective inhomoge-
neous form 970
– Phillip's convective inhomogeneous
form 973
– Ribner's form 968
integral length scale 953, 1005, 1006
integral time scale 953
internal energy 946, 955, 977, 981
inviscid flow 946, 961
irrotational flow 947, 961
isentropic condition 961
isentropic flow 946, 964, 979
isothermal flow 947

J

jet noise 989, 990, 1000, 1003, 1016,
1017

K

Kirchhoff source term 987

L

Lamb vector 977, 979
laminar flow 947
Laplace operator 962
– cylindrical 962
– spherical 963
Lighthill stress tensor 964, 972, 997,
1010
Lighthill's equation 963, 970, 973, 974
loading noise 1008, 1009

M

- Mach number 962, 964, 969, 970, 976, 978–980, 987, 991, 994, 997, 999, 1002, 1007, 1008, 1010, 1011, 1013, 1014, 1016
- models of fluid flows 946
 - Adiabatic flow 946
 - boundary layer flow 948
 - compressible flow 946
 - homentropic flow 947
 - ideal flow 946
 - incompressible flow 946
 - inviscid flow 946
 - irrotational flow 947
 - isentropic flow 946
 - isothermal flow 947
 - laminar flow 947
 - non-uniform flow 947
 - Real flow 946
 - rotational flow 947
 - stationary flow 947
 - steady flow 947
 - turbulent flow 947
 - uniform flow 947
 - unsteady flow 947
 - viscous flow 946
- momentum equation 947, 949, 952, 954, 955, 957, 959–961, 963, 968, 971, 973, 976–978, 981, 984, 985, 993
- momentum flux 949, 989, 995–997
- monopole source 965, 985, 989, 990, 994, 995, 1012
- moving Kirchhoff surfaces 998
- moving source 947, 970, 984, 986, 993, 994, 998, 999, 1002, 1007, 1014–1016

N

- Navier-Stokes equation 952, 960
- near-field and far-field solution 965
- Newton's law 960
- non-linear disturbance 956, 957
- non-uniform flow 947, 971

O

- octupole source 964, 967, 989, 996

P

- perturbation quantity 956
- Poisson's equation 968, 969
- power law 1002, 1012–1014
 - of compact aerodynamic multipoles 1012
 - of moving aerodynamic sources 1014
 - of noncompact aerodynamic multipoles 1012
- power law for the acoustic intensity 1002
- power law for the aerodynamic sound sources 1012
- power spectral density 954, 1000, 1003
- premises of linear acoustics 961
- Pressure-source 968, 969, 1016
- pressure-source theory
 - by Meecham 969
- pseudo-sound 968

Q

- quadrupole noise 1009, 1016
- quadrupole source 964, 965, 976, 985, 990, 995–997, 1007, 1012

R

- random fluctuations 951, 953
- ratio of the specific heats 956
- real flow 946
- retardation time 965
- retarded source strength 965
- Reynolds averaging 950, 952
- Reynolds stress 949, 953, 964, 993
- Ribner's source term 974
- rigid boundaries 966
- rotational flow 947, 948
- rotor
 - dipole sound 1011, 1012
 - monopole sound 1011
- Rotor noise 1007, 1010, 1017

S

- Scales 948, 953
- self-noise 960, 967, 975
- sexdecupole source 997
- shear noise 960, 967, 971, 975

shear stress 945, 946, 949
 solid boundaries in flow 966
 solution of inhomogeneous wave
 equation 991
 sound field of moving point sources
 994
 sound from free turbulence 966
 sound generation
 – by flow interaction 984
 – by fluctuating heat sources 988
 – by interaction of turbulence and
 sound 960
 – by turbulent interaction 960
 – by turbulent two-phase flow 992,
 1015
 sound propagation
 – in a shear flow 972
 – in non-uniform flow 971
 source terms 964, 967, 970–972, 976,
 983, 987
 specific
 – enthalpy 946, 955
 – entropy 946
 – heat 946, 956
 – heat ratio 946
 – internal energy 946
 speed of sound 946, 956, 963, 970, 1013
 spherical co-ordinates 963
 stationary flow 947
 steady flow 947, 989
 subsonically moving surface 999
 substantial derivative 969, 970
 supersonic jet flow 1003
 supersonically moving surface 999

T

thermal conductivity 945, 946, 970,
 971, 981
 Thermodynamic relationships 955
 thickness and loading noise 1009
 Tools in fluid mechanics 949
 turbulence 947, 948, 951, 954, 960, 966,
 984, 992, 1001, 1002, 1005–1007,
 1013, 1015, 1016
 turbulence level 948
 turbulent flow 947–949, 959, 960, 986,
 1015

U

uniform flow 947, 962

V

vector Green's function 980
 velocity potential 962
 viscous flow 946, 948, 1017
 viscous stresses 963, 967, 970, 986
 vortex sound 976, 1016, 1017
 vorticity 947, 976–980, 1016

W

wave equation
 – convected 972
 – in uniform flow 962
 – inhomogeneous 949, 963–965, 968–
 971, 973, 975, 976, 978, 987–989, 991,
 993, 1000
 – linear, homogeneous 962

O. Analytical and Numerical Methods in Acoustics

A

absorbing boundary condition opera-
 tors 1080
 absorption coefficient 1019–1021,
 1025, 1027
 acoustic equilibrium equation 1075
 acoustic-structural analogy 1075
 average admittance 1026
 averaged square error 1020
 axial propagation constant 1029

B

backward propagating modes 1029
 boundary element method 1019,
 1040, 1046, 1049, 1051, 1059, 1071
 boundary equations 1041, 1042, 1061
 boundary error 1040, 1042, 1053, 1056,
 1059
 boundary integral equation 1019,
 1059, 1061, 1063, 1065, 1068, 1072,
 1073, 1103–1105

boundary integral methods 1061
 boundary operator 1035, 1044
 branch points 1035
 bulk modulus 1074
 Burton and Miller method 1068

C

capillaries 1028
 cascades of ducts 1033
 Cat's Eye model 1081, 1082, 1107
 circular piston in an infinite rigid baffle 1049
 collocation method 1063
 Combined integral equation formulation 1066, 1106
 complex source point 1049, 1051, 1071, 1103, 1104
 Computational optimisation of sound absorbers 1019
 Computing with mixed numeric-symbolic expressions 1028
 condition number 1055, 1069, 1105
 contracting duct 1030, 1031
 coupled fluid-structure equation 1080
 Critical frequencies 1046, 1047, 1052, 1060, 1066, 1069, 1071

D

damping factor 1072
 differentiated integral equation 1068
 diffuse sound incidence 1020, 1023, 1026, 1027
 dipole terms 1063
 directivity pattern 1057, 1058
 Dirichlet condition 1036
 discretization of the boundary integral equation 1063
 discretized functional 1076, 1077
 discretized global functional 1078
 double-layer potential 1061, 1062, 1068, 1069

E

effective sound power 1035, 1056
 eigenfrequencies 1037, 1075, 1078
 eigenfunctions 1072
 eigenmodes 1037, 1072, 1075

eigenvalue problem 1037, 1078
 equilibrium of stresses 1074
 equivalent
 – radiant problem 1036
 – source system 1042
 error field 1046
 Euler-Lagrange equation 1076
 expanding duct 1030, 1031
 exterior Dirichlet problem 1061, 1062, 1105

F

field admittance 1035, 1036
 field matching 1086, 1096
 finite element method (FEM) 1019, 1041, 1059, 1071, 1074
 finite element models (FEM) 1064
 fixed parameters 1021
 fluid-elastic structure interaction problem 1037
 fluid-structure coupling 1078
 forward propagating modes 1029
 frequency response curve 1020
 Frobenius norm 1055
 full-field equations
 – of the first kind 1046, 1048, 1052
 – of the second kind 1047, 1048, 1052, 1054

G

Galerkin method 1045
 Gaussian elimination 1064
 general impedance boundary 1073
 general termination 1033
 generalised
 – eigenvalue problem 1078
 generalised full-field equations, 1052
 global shape functions 1077
 Gram-Schmidt technique 1048
 Green's function 1069, 1070, 1072
 Green's function for a rectangular enclosure, 1071

H

Hamilton's principle 1076
 Helmholtz equation 1034, 1036–1040, 1042, 1049, 1059, 1070, 1075, 1076, 1103–1105

Helmholtz formula 1060, 1072, 1080
 Helmholtz integral equation 1040,
 1046, 1059–1063, 1065–1068, 1070,
 1071, 1103–1106
 hybrid evaluation 1033

I

impedance boundary condition 1036
 incident wave 1032, 1036, 1037, 1057
 integral operators 1063, 1065, 1068,
 1069, 1105
 interior
 – Dirichlet problem 1046, 1061, 1066,
 1067, 1069
 – Helmholtz integral formula 1070
 – Neumann problem 1061
 Irregular shaped cavities 1075, 1078,
 1107
 iterative
 – linear system of equations 1028
 – solvers 1065
 – systems, 1033

J

Jacobi iteration 1065

L

Lagrange function 1076
 Lagrange multiplier 1067
 Least squares minimization technique
 1047
 linearly elastic structure 1037, 1038

M

matching
 – for the sound pressure 1087
 matching conditions 1086
 matrix norm 1055
 mechanical analogy 1074
 method of mirror sources 1071
 method of weighted residuals 1040,
 1042
 minimization process 1042
 minimum search 1021
 mixed boundary conditions 1048
 mixed numerical symbolic evaluation
 1033

mode coupling integrals 1088, 1096–
 1098
 Mode norms 1029, 1030, 1096, 1098
 mode orthogonality 1085, 1086
 mode profiles 1029
 modified Green's functions 1069
 monopole terms 1063, 1070
 multi-layer absorber 1019–1021, 1026
 multi-point multipole method 1051,
 1056
 multigrid method 1060, 1066, 1104,
 1105
 multipoles 1044, 1051, 1057

N

Neumann boundary value problem
 1034
 Neumann symbol 1072
 nodal variables 1076, 1078
 nodes 1064, 1067, 1076–1078
 normalizing factors 1043
 null-field equations 1040, 1045, 1046,
 1048, 1051, 1052, 1055, 1057, 1058,
 1067, 1068
 numerical sound intensity method
 1035

O

one-point multipole method 1051,
 1056
 Orange model 1094
 Orthogonality of modes 1095
 orthogonalization method 1048
 orthonormal 1043, 1048, 1067

P

parameters
 – variable 1022, 1023, 1026, 1027
 particle velocity source 1032
 Picard iteration 1065, 1066
 potential-layer approach 1061
 procedure for optimisation 1019, 1021

R

radiation condition 1035–1037, 1039,
 1040, 1060, 1070, 1080, 1081
 radiation efficiency 1034, 1035

Radiation problem 1034–1036, 1040,
1042, 1046, 1063, 1065, 1066, 1070,
1072, 1081, 1082, 1092, 1102–1105
Reduction of the system of equations
1091

S

scattering problem 1019, 1036, 1037,
1040, 1056, 1059, 1072, 1079, 1081,
1082, 1103
secular equation 1029
self-adjoint formulation 1065
shape functions 1064, 1076–1078
single-layer potential 1061, 1062, 1066
six elements per wavelength rule
1064
Sommerfeld's radiation condition
1035, 1039
Sound field in interior spaces 1037
Sound fields in rooms and half-
spaces 1070
sound pressure source 1031
sound radiation into a half-space
1071
source condition 1031–1033
source function 1040–1042, 1044,
1048, 1051, 1054, 1056
source simulation technique (SST)
1040
source strengths 1055
source superposition 1055
spherical harmonics 1043, 1093
spherical wave functions 1040, 1042–
1045, 1047, 1048, 1051, 1054, 1067,
1080
stability and the condition number
1055

strain tensor 1038
stress tensor 1038
structural impedance matrix 1079
successive overrelaxation method
1065
superposition method 1040, 1051,
1103
surface velocity distribution 1073
surface velocity error 1047, 1053, 1056
symmetry relation 1042–1047, 1052

T

target quantity 1021, 1028
target strength 1037, 1057, 1058
termination condition 1031, 1033
transmission condition 1039, 1073
transmission problem 1019, 1039,
1072, 1073
Treatment of singularities 1070
triangularization 1076
two-grid method 1066

V

variable absorber parameters 1021,
1023
variational principle 1046, 1075, 1079
velocity potential 1038
viscoelastic material 1038
viscous and thermal losses 1028

W

weight function 1021, 1024
weighted residual equations 1042,
1044–1047
weighted residuals 1040, 1042, 1044,
1057
weighting functions 1040

P. Variational Principles in Acoustics

A

acoustics of porous media 1112
anisotropic absorbent 1118
anisotropic and inhomogeneous lining
1121

B

boundary conditions
– Diriclet 1110
– Neumann 1110
boundary layer thickness 1115

C

circular annuli 1122
 circular tube 1114, 1131
 coupled eigenproblem 1128
 cut-on frequencies 1110, 1112

D

dispersion relation 1117, 1120, 1123
 duct with
 – flexible walls, no mean flow and no lining 1126
 – rigid walls and mean gas flow 1126
 – two cross-sectional lines of symmetry 1121

E

Eigenfrequencies of a rigid-walled cavity 1110
 eigenfrequency 1111
 eigenmodes 1110, 1127
 eigenvalue problems 1110, 1130
 energy equation 1113
 equivalent fluid 1117, 1118, 1121
 Euler equations 1110, 1112, 1113, 1117, 1118, 1121, 1122, 1125, 1128

F

flat-oval duct 1110, 1111, 1130
 forced boundary condition 1114, 1117
 functional 1109, 1112, 1113, 1117, 1118, 1121, 1122, 1124, 1125, 1128, 1129

G

governing differential equations 1110, 1124

H

heat-conducting walls 1113
 Helmholtz equations 1117, 1127

L

Lagrange density 1109
 Lagrange equations 1109
 Lagrange-Euler equation 1109
 Lagrangian 1109
 low frequency approximation 1115, 1117, 1125

M

Mach number 1118
 mean flow 1123, 1126
 mode functions 1111
 mode shape 1120, 1123

N

Navier-Stokes equation 1113

S

stationary value 1109

T

thermal boundary layer 1114, 1115
 trial functions 1109–1112, 1114, 1116, 1119, 1122, 1128–1130

V

variational functional 1118, 1121, 1122
 variational methods 1109, 1110
 variational principle 1109, 1110, 1113, 1117
 variational statement 1118, 1125, 1128
 variational techniques 1110
 velocity potential 1109
 viscous and thermal boundary layer 1114

Q. Elasto-Acoustics

A

acoustic Poynting vector 1143
 Anderson localisation 1146
 angle of sound incidence 1175

Anisotropic media 1133, 1140, 1151, 1195, 1196
 anisotropy
 – cubic 1137

- orthotropic 1136
- Anisotropy and isotropy 1135

B

- balance of forces 1135, 1139
- bar
 - bending modulus 1168
 - bending wave velocity 1168
 - longitudinal wave velocity 1167
- Bending mode 1157, 1158
- bending stiffness 1158, 1160, 1161, 1165, 1175, 1176, 1179, 1180, 1182, 1183, 1190
- bending waves 1160, 1162, 1164, 1165
 - wave equation 1175
 - wave number 1170
- Bernoulli-Euler model 1164, 1165
- Bloch wave 1145–1147, 1195
- bulk modulus 1137, 1138

C

- Christoffel's equation 1151, 1153
- Circular cylindrical shell 1177
- coincidence frequency 1163, 1169, 1175, 1192–1194
- Cole-Cole equation 1142
- complex modulus 1141, 1175
- compression 1133, 1134, 1137–1139, 1149, 1150, 1152, 1167, 1184
- compression modulus 1138, 1150, 1167
- continuity of displacements 1139
- creep compliance 1141
- critical frequency 1162, 1169, 1175
- cylindrical shell 1177, 1186
 - longitudinal vibration 1188
 - radial vibration 1188
 - ring-shaped vibration 1189
 - torsion 1188

D

- D'Alembert's principle 1135
- Density of eigenfrequencies in plates 1178
- diffusion coefficient 1146
- Dilatation modulus 1167
- dispersion relation 1163, 1165

- divergence relations for intensity 1144

E

- Effective moduli 1148–1150
- eigenfrequencies
 - of spherical shells 1191
- eigenvalues 1152, 1171, 1187–1189
- elastic mean free path 1145
- elastic-viscoelastic correspondence 1142
- elementary deformations 1138
- energy balance 1143
- energy density 1133, 1144, 1147, 1152, 1156
- energy velocity 1145
- equation of motion 1134, 1135, 1147, 1151

F

- fading memory 1141
- far field of a plate
 - excited by a point force 1193
- Fresnel equations 1140
- Fundamental equations of motion 1133

G

- group velocity 1133, 1145, 1152, 1153, 1155, 1156, 1158, 1162, 1184, 1195

H

- half-value bandwidths 1143
- Halpin-Tsai equations 1150
- Hamilton's principle 1134
- Hashin-Shtrikman bounds 1149
- hollow circular cylinder 1164, 1165
- Homogeneous isotropic plate 1160, 1161, 1163
- Homogenisation 1145, 1147, 1148, 1151
- Hooke's law 1134, 1135

I

- intensity 1133, 1143, 1144, 1147, 1152–1156, 1160, 1162, 1163, 1195
- Interface conditions 1139
- isotropic fibre materials 1150

isotropic media 1133–1135, 1140,
1151, 1153, 1195

K

Kelvin-Voigt model 1141
Kirchhoff vector 1143, 1144
Kramers-Kronig relations 1141, 1195

L

Lagrange-Euler equations 1134
Lagrangian density 1133, 1134
Lamé constants 1166
Lamb waves 1154, 1156
lateral contraction 1139, 1164, 1167
line force 1179, 1191, 1193
linearised theory 1134
logarithmic decrement 1141
longitudinal polarisation 1153
longitudinal waves 1139, 1147, 1153,
1163
loss factor 1141, 1143, 1175, 1192, 1194
loss tangent 1141

M

material
– as composite sphere assembly
1150
– with cubic grains 1149
– with periodically spaced parallel
fibres 1150
– with polycrystals 1149
– with spherical inclusions 1149
– with stack of layers 1150
Material damping 1140
Maxwell model 1141
measurement of the intensity 1162
Modes of rectangular plates 1170
moduli of isotropic materials 1165

O

one-dimensional periodicity 1147

P

Partition impedance of plates 1174
Partition impedance of shells 1176
Periodic media 1146, 1151
Plane waves in unbounded homogeneous media 1151

plate

– free 1168, 1169, 1192, 1194, 1195
– simply supported 1174
plate bending modulus
– wave equation 1171
– wave velocity 1168
plate dilatational stiffness 1176
Plate waves 1154, 1195
point force 1179, 1183, 1192, 1193
Poisson numbers 1136
Poisson ratio 1162, 1167, 1173, 1180,
1182, 1186, 1190, 1192
polarisation 1151–1153
pure mode 1152

Q

quality factor 1141
quasi-longitudinal mode 1156, 1158
quasi-longitudinal waves 1160, 1163

R

radiation 1191–1193, 1195
radiation of plate
– excited by a line force 1191
– excited by a point force 1191
– finite plate excited by a point force
1192
Random media 1145, 1196
Rayleigh velocity 1163, 1165
Rayleigh waves 1159, 1195
Rayleigh's principle 1144, 1145, 1155
Rayleigh-Lamb modes 1155, 1195
reciprocal lattice 1146, 1147
reflected waves 1140
refracted waves 1140
relaxation modulus 1141
relaxation time 1142
ring-shaped bar 1189
rotatory inertia 1163, 1165

S

secular equation 1176, 1177
shear moduli 1136, 1137, 1149
shear motion 1187
shear stiffness 1176, 1181
shear waves 1138, 1154, 1156
Similarity relations for spherical
shells 1190

simply supported plate 1174
 slip assumption 1139
 slowness vector 1152
 Snell's law 1140
 sound radiation from plates 1191
 Spherical shell 1177, 1190, 1191
 strain tensor 1134
 stress tensor 1134, 1135
 summation rule 1133
 surface intensity 1143, 1195

T

Table

- with bending moduli of sandwich panels 1170
- with foot point admittances 1180
- with relations between isotropy parameters 1138
- with transmission coefficients at steps 1185
- with types of sandwich panels 1169

Time-harmonic wavefields 1144

Timoshenko bar 1181
 Timoshenko mode 1165
 Timoshenko-Mindlin model 1163
 torsional stiffness 1164
 Torsional waves 1138, 1164
 transmission coefficient 1184–1186
 Transmission loss at steps 1184
 transversal plane wave 1153
 transversal polarisation 1152, 1153
 triclinic anisotropy 1135

V

velocity of a plate when excited by a diffuse sound field 1193
 viscoelastic models 1140
 Voigt and Reuss averages 1148, 1149
 Voigt constants 1161

W

Waves in bounded media 1154
 Waves in thin beams 1163
 Waves in thin plates 1160

R. Ultrasound Absorption in Solids

A

Absorption in amorphous solids and glasses 1210
 absorption 1197, 1204–1212
 Absorption and dispersion in solids by dislocations 1204
 amorphous solids 1210, 1211

B

Burger's vector 1204

C

collision time 1209

D

damping coefficient 1200
 de Haas van Alphen effect 1209
 diffraction losses 1201
 dispersion 1204, 1207, 1210, 1211

F

Fermi surface 1208, 1209
 Fermi velocity 1197, 1208

G

Generation of ultrasound 1198
 geometrical losses 1201

I

Interaction of ultrasound with electrons in metals 1208

K

Kramers-Kronig relation 1211

L

Lamé constants 1202
 logarithmic decrement 1200

M

magnetic field dependence of absorption 1209

P

Phonon interactions 1207

piezoelectric disc transducer 1199

piezoelectric equations 1198

piezoelectric transducers 1198

polycrystals 1202, 1207

Q

Q-value 1197

quantum oscillations 1209

R

resonance phenomena of electrons 1209

S

scattering

– at elastic spheres 1202

– cross-section 1201

– in polycrystalline materials 1202

– losses 1201

– parameter for longitudinal waves 1202

– parameter for transversal waves 1202

stress field in a piezoelectric solids 1210

superconducting metal 1209

T

Thermoelastic effect 1206–1208

thin film transducer 1199

U

Ultrasonic attenuation 1199

ultrasonic backscattering 1204

W

wave equation 1198

wave propagation in piezoelectric semiconducting solids 1210

General Index

Capitalised initials of entries (if not names) indicate Sections.

Π

Π networks 66

Π-circuit impedance 66

Π-fourpole 445

A

Absorption in amorphous solids and glasses 1210

absorbed power 493–495

absorbent dam

– flat 214

– high 214

– semicircular 214,227

absorbent neck walls 430,431

– narrow neck 431

– wide neck 431

absorbent sound source in a capsule 847

absorber

– uneven 141

– with random admittance 142

– with variable admittance 141

absorber in baffle wall

– circular absorber 140

– in constant height above baffle 142

– rectangular absorber 141

– strip in baffle wall 144

Absorber of flat capillaries 404

absorber variable 349,350,353,355, 358,373, 394,504,546,837

absorbing boundary condition operators 1080

absorption 1197,1204–1212

Absorption and dispersion in solids by dislocations 1204

absorption coefficient 46,127,128, 130,133–136, 139,405–407,481–

483,490–492,495,500,501, 1019–1021,1025,1027

absorption cross section 138,145, 147,187

– for diffuse sound incidence 188

– of a cylinder 197

absorption of finite-size absorbers 136,153

Acoustic analogy

– with effects of solid boundaries 984

– with mean flow effects 970

acoustic corner effect 152

acoustic efficiency 1003

acoustic equilibrium equation 1075

Acoustic power 793–797,801

acoustic power 1003,1004

acoustic Poynting vector 1143

acoustic-structural analogy 1075

Acoustically Lined Circular Duct 837

addition theorem 908

adiabatic boundary condition 598

adiabatic exponent 6,9,10,35,37

adiabatic flow 946

adjoint absorber 725–729,731

admittance

– average 403,477

– homogenised 403

admittance equation 610

admittance of annual absorbers

– approximated with flat absorbers 643

admittance relation 11,42

admittance rule 11

aerodynamic sound 949,964,1000

– Doak's theory of aerodynamic sound 981

– fluctuations of flames 991

– turbulent flames 991

Aerodynamic sound sources 1000, 1012
 algorithm
 – for optimisation of generalised Cremer admittance 729
 algorithms for mirror source construction 939
 amorphous solids 1210, 1211
 Amplitude nonlinearity of fences 742
 Anderson localisation 1146
 anechoic termination 797, 801
 angle of sound incidence 1175
 angular distribution 476, 478
 angular far field 139, 141, 147
 anisotropic absorbent 1118
 anisotropic and inhomogeneous lining 1121
 Anisotropic media 1133, 1140, 1151, 1195, 1196
 anisotropy
 – cubic 1137
 – orthotropic 1136
 Anisotropy and isotropy 1135
 Annular Airgap Lined Duct 834, 840
 Annular ducts 647, 754, 762, 764, 790
 anti-symmetrical modes 606, 611, 613, 615, 619, 620, 627, 707, 712, 715, 718, 733, 776, 874
 aperture 889, 897–899
 arbitrarily moving surface 999
 array
 – of $\lambda/4$ -resonator 474
 – of circular necks 434
 – of Helmholtz resonators 435, 456

 - with a bulk reacting lining 619, 621, 623
 - with an anisotropic lining 621

- with an unsymmetrical bulk lining 628
- with cross-layered lining 650, 651, 657
- with unsymmetrical bulk lining 628
- with unsymmetrical local lining 750

flat-oval duct 1110, 1111, 1130

flow impedance 793–795, 797, 802, 805, 818–820, 830, 831, 833, 836, 837

flow resistivity

- of random fibre orientation 350

flow resistance coefficient 743

flow resistivity 347, 349–351, 353–357, 360, 369, 370, 373, 379, 387, 394, 399, 837

- of parallel fibres 350, 356

- of transversal fibres 350

- with random fibre diameter and orientation 356

flow resistivity 349

flow velocity profile 353, 355

flow-induced nonlinearity of perforated sheets 748

fluid

- density 955
- energy 955
- ideal 945, 964
- Newtonian 945
- non-Newtonian 945
- pressure 946
- viscosity 970

fluid-elastic structure interaction problem 1037

fluid-structure coupling 1078

flush-tube three-pass perforated element 827

foil 506, 511, 519

- elastic 457, 461, 462, 465–467, 471
- elastic, with losses 467
- limp or elastic 403, 465
- porous and elastic 467
- porous and limp 466
- tight and elastic 466
- tight and limp 466
- tight or porous 403, 465

Foil resonator 469, 470

force impedance 527

forced boundary condition 1114, 1117

forward propagating modes 1029

foundation of the mirror source approximation 882

four-pole equations 66

four-pole parameters 796, 797

free bending wave number 525, 529

Free plate with an array of circular holes 429

free-space solution 965

frequency response curve 1020

Fresnel equations 1140

Fresnel's integral 144

friction 350, 351

friction force coupling 499, 500

Frobenius norm 1055

full-field equations

- of the first kind 1046, 1048, 1052

- of the second kind 1047, 1048, 1052, 1054

functional 1109, 1112, 1113, 1117, 1118, 1121, 1122, 1124, 1125, 1128, 1129

Fundamental differential equations 5

fundamental equations 386, 388, 389

Fundamental equations of motion 1133

fundamental solutions 873

G

Galerkin method 1045

gas constant 9, 10, 36, 945, 956

Gaussian elimination 1064

General criteria for mirror sources 883

general impedance boundary 1073

general termination 1033

generalised eigenvalue problem 1078

generalised full-field equations, 1052

generalised wave equation 987

generalized bending stiffnesses 537

Generation of ultrasound 1198

geometrical losses 1201

Geometrical room acoustics in parallel-piped 877

geometrical shadow limit 217

geometrical subtasks 889, 926

Global application of the principle of superposition 921
 global shape functions 1077
 goal of scouting 931
 governing differential equations 1110, 1124
 gradient 12, 31
 Gram-Schmidt technique 1048
 granular pellets 829
 graphical evaluation of attenuation 644
 grazing flow 808, 818, 834, 841
 grazing-flow impedance 818, 836, 837
 Green's function 13–18, 137, 138, 143, 289, 1069, 1070, 1072
 – for a rectangular enclosure, 1071
 – in 2-dimensional polar co-ordinates 17
 – in 3-dimensional infinite space 17
 – in Cartesian co-ordinates 19
 – in cylindrical co-ordinates 18
 – in spherical harmonics 17
 – of a set of plane waves 16
 – of cylindrical wave 16
 – of point source 13
 Green's functions and formalism 13
 Green's integral 12
 Grid on porous layer
 – grid with finite thickness, narrow slits 53
 – grid with finite thickness, wide slits 56, 57
 – thin grid 50, 52, 53
 Grigoryan's expansion of the characteristic equation 752
 Grigoryan's method 771
 group velocity 1133, 1145, 1152, 1153, 1155, 1156, 1158, 1162, 1184, 1195
 grouping of mirror sources 903, 905

H

half-value bandwidths 1143
 Halpin-Tsai equations 1150
 Hamilton's principle 25, 1076, 1134
 Hankel transform 291, 341, 343
 Hartree harmonics 44
 Hashin-Shtrikman bounds 1149
 heat balance 6

heat conduction 6, 35, 37
 heat wave 6
 heat-conducting walls 1113
 Heaviside function 984
 Helmholtz equation 1034, 1036–1040, 1042, 1049, 1059, 1070, 1075, 1076, 1103–1105, 1117, 1127
 Helmholtz formula 1060, 1072, 1080
 Helmholtz integral equation 1040, 1046, 1059–1063, 1065–1068, 1070, 1071, 1103–1106
 Helmholtz resonator 297, 403, 419, 435, 436, 444, 449, 452, 456, 502, 830
 Helmholtz vorticity equation 979, 980
 Helmholtz' source theorem 62, 847
 Helmholtz' source superposition theorem 462
 Helmholtz' wave equation 5
 Hemispherical source and capsule 857
 high dam 215, 218, 219, 221, 223
 – hard ground 215, 219, 222
 – line source 223
 – on absorbent ground 221, 223
 – on hard ground 218
 higher modes 48, 56
 higher modes in the neck 321, 322, 324
 hole transmission with equivalent network 515
 hole, sealed, filled 515
 hollow circular cylinder 1164, 1165
 homentropic flow 947, 978, 982
 Homogeneous isotropic plate 1160, 1161, 1163
 Homogenisation 1145, 1147, 1148, 1151
 Hooke's law 1134, 1135
 Hose 801, 804–806, 820, 822, 832, 835, 840
 hose-wall impedance 805
 Huygens-Rayleigh integral 331
 hybrid evaluation 1033

I

ideal flow 946
 illegal mirror source 883, 884, 886, 887, 896, 909, 912
 impedance boundary condition 1036

K

Kelvin-Voigt model 1141
 Kirchhoff source term 987
 Kirchhoff vector 1143, 1144
 Kramers-Kronig relations 1141, 1195, 1211

L

Lagrange density 25, 1109
 Lagrange equations 1109
 Lagrange function 25, 1076
 Lagrange multiplier 25, 1067
 Lagrange-Euler equation 1109, 1134
 Lagrangian 1109
 Lagrangian density 1133, 1134
 Lamé constants 1166, 1202
 Lamb vector 977, 979
 Lamb waves 1154, 1156
 Lambert scattering 937
 Lambert's law 935, 939
 laminar flow 947
 Laplace operator 962
 – cylindrical 962
 – spherical 963
 Laplacian
 – of a scalar 32
 – of a vector 32
 late lateral sound level 942
 lateral contraction 1139, 1164, 1167
 lateral energy fraction 941
 lateral mode profiles 681, 689, 706
 least attenuated mode 517, 518, 602, 607, 608, 612, 623, 626–628, 644, 647, 686, 688, 720, 721, 727, 737, 738, 750, 754, 776, 782, 784
 – in rectangular duct 607
 Least squares minimization technique 1047
 level decay 878, 881
 level difference 796, 798
 Lighthill stress tensor 964, 972, 997, 1010
 Lighthill's equation 963, 970, 973, 974
 line force 1179, 1191, 1193
 line source 21, 24, 199–201, 204–207, 209, 210, 223, 229
 – above an absorbing plane 164

linearised theory 1134

linearly elastic structure 1037, 1038

Lined duct corners and junctions 693, 788

Lined ducts 595, 601, 607, 613, 650, 693, 697, 762, 781, 788

loading noise 1008, 1009

locally reacting cylinder 198, 199, 201

locally reacting layer 131

logarithmic decrement 1141, 1200

long source 341

longitudinal polarisation 1153

longitudinal wave number 526, 529, 535

longitudinal waves 1139, 1147, 1153, 1163

looping in mirror source scouting 932, 933

loss factor 420, 426, 428, 467, 485, 496, 529, 535, 536, 542, 552, 566, 590, 1141, 1143, 1175, 1192, 1194

loss tangent 1141

low frequency approximation 1115, 1117, 1125

lowest resonance 419, 420, 429, 470

lumped elements 65

M

Mach number 732, 736, 744, 746, 748, 789, 794, 795, 798–802, 808, 820, 833, 834, 837, 838, 840, 962, 964, 969, 970, 976, 978–980, 987, 991, 994, 997, 999, 1002, 1007, 1008, 1010, 1011, 1013, 1014, 1016, 1118

magnetic field dependence of absorption 1209

mass reactance

– of resonator orifice 417

massivity 198, 238, 240, 242, 244, 247, 248, 347, 350, 353, 357–359, 361, 369, 371, 373, 376, 384

matching

– average sound pressures 409

– for the sound pressure 1087

– of fields 579, 656, 681, 691, 695, 699

matching conditions 1086

- material
 - as composite sphere assembly 1150
 - with cubic grains 1149
 - with periodically spaced parallel fibres 1150

 number of reflections 877, 879, 880
 numerical sound intensity method
 1035

O

octupole source 964, 967, 989, 996
 office fences
 – with second principle of superpo-
 sition 584
 oncoherent sound incidence 868
 one-dimensional periodicity 1147

one-point multipole method 1051,
 1056
 open-cell model 371, 373, 375
 open-cellular foam 348
 open-circuit source 62
 open-end elements 818, 821
 optimised parameters 729
 Orange model 1094
 orchestra pit 897–900
 orifice impedance
 – back side 409, 417, 433, 436, 445–
 447
 – front side 409, 413, 417, 419
 orifice input admittance 678
 original source 882, 883, 887, 889, 890,
 907, 911, 912, 932
 orthogonality
 – of modes in ducts with bulk lining
 621
 orthogonality integral 15
 Orthogonality of modes 19, 1095
 – in a bulk reacting duct 20
 – in a locally reacting duct 19
 orthogonality relation 17, 621, 655
 orthogonalization method 1048
 orthonormal 1043, 1048, 1067
 orthonormal basis vectors 31
 oscillating mass 287, 288, 293, 316,
 317, 326, 328, 342, 403, 419, 426, 436,
 445, 448, 452
 – of a fence in a hard tube 328

P

panel perforation 497
 Parallel Baffle Muffler 832, 836, 839
 parallel walls 891, 907, 910, 911
 parameters
 – variable 1022, 1023, 1026, 1027
 particle velocity 5, 13, 23, 24, 37, 39
 particle velocity profiles 597
 particle velocity source 1032
 partition impedance 527–529, 533,
 535, 538, 542, 545, 552, 563, 566, 571,
 575, 576, 620, 628, 645, 692, 742, 748,
 749, 807, 837, 838, 844, 845, 848, 854,
 858, 862, 871
 – of membranes 469
 – of plates 1174

porous material 347, 349, 351, 352, 355, 370, 381, 385–387, 391, 399, 504, 506, 509, 511, 519, 538, 541, 546, 571

- model with flat capillaries 354, 356

porous panel absorber

- rigorous solution 496

potential

- scalar 6, 7
- vector 6

potential coupling factor 387

potential function 13, 25

potential-layer approach 1061

potentials 372, 373, 388, 390

power law 1002, 1012–1014

- for the acoustic intensity 1002
- for the aerodynamic sound sources 1012
- of compact aerodynamic multipoles 1012
- of moving aerodynamic sources 1014
- of noncompact aerodynamic multipoles 1012

power spectral density 954, 1000, 1003

Prandtl number 8, 9

premises of linear acoustics 961

pressure force 367

pressure source 403

pressure variation 38

Pressure-source 968, 969, 1016

pressure-source theory

- by Meecham 969

primary absorber 726, 728, 729, 731

primitive root diffuser 475

principle of hard-soft superposition 163

principle of impedance mismatch 801

principle of superposition 218, 224

- for unsymmetrical absorption 920

Principles of superposition

- for unsymmetrical walls 22
- hard-soft superposition 24
- in a symmetrical space 23

probability density 877, 936, 939

procedure for optimisation 1019, 1021

propagation constant 347, 352, 355, 358, 371, 375, 381, 394, 400, 503, 509,

511, 517, 544, 545, 575, 595, 598–600, 602, 622, 650, 671, 673, 676, 695, 706, 740, 747, 748, 750

- in a flat capillary 405
- pseudo-random variation 474
- pseudo-sound 968
- pure mode 1152

Q

Q-value 1197

quadratic residue diffuser 475

quadrupole noise 1009, 1016

quadrupole source 964, 965, 976, 985, 990, 995–997, 1007, 1012

quality factor 1141

quality factor of shell resonance 262

quantitative corner effect 152

quantum oscillations 1209

quasi-homogeneous material 347, 350, 352, 399

quasi-longitudinal mode 1156, 1158

quasi-longitudinal waves 1160, 1163

Quincke tube 833, 841

R

radial mode 630, 633, 641, 642, 647

radiated power 844

radiating mode in resonance 262

radiating spatial harmonics 46, 51

Radiation

- flow resistance 795
- impedance 793, 795, 797, 805

radiation 1191–1193, 1195

- from the open end of a flow duct 795

Radiation and excitation efficiencies 344

radiation condition 1035–1037, 1039, 1040, 1060, 1070, 1080, 1081

radiation directivity 330

radiation efficiency 1034, 1035

radiation factor 288

Radiation impedance 287, 289–291, 293, 296, 298, 300, 301, 304, 306, 310, 312, 314, 316, 328, 329, 340, 342, 345, 346

- definition 287, 314

- radiation impedance 154, 403, 404, 414, 507, 508, 512, 513, 516, 519, 520, 700, 701
 - evaluation 301
 - mechanical 287, 329
 - of shell modes 261
- radiation loss 287, 699–702
- radiation of plate 344
 - excited by a line force 1191
 - excited by a point force 1191
 - finite plate excited by a point force 1192
- Radiation problem 1034–1036, 1040, 1042, 1046, 1063, 1065, 1066, 1070, 1072, 1081, 1082, 1092, 1102–1105
- radiation reactance 309, 320–322
- radiator
 - breathing sphere 293
 - cylindrical 295
 - finite length cylinder 335
